Fire-EMS Standard Operating Guideline

Section:	2 General
Title:	Aeromedical Transport
Date:	August 2008

AEROMEDICAL TRANSPORT

Aeromedical transport should be requested directly from the scene by rescue personnel. Any Virginia certified EMS provider from any licensed EMS agency can make the request for medivac. The person making the request must identify himself/herself to EOC if they arrive on scene prior to the arrival of the Initial Assessment of the patient.

Rapid transport for all critically ill/injured patients is essential. Never delay transport to wait for medivac, or to wait for ALS response, if those levels of response are needed, make the appropriate request and begin transport to the nearest hospital, if ALS or medivac are available, you can meet them enroute.

LANDING ZONE

Emergency Service personnel are requested to provide Augusta EOC with landing zone details one the availability of an aeromedical service is determined.
